Plant-microbe Interactions 2: Volume 2

Gary Stacey, Noel T. Keen

Plant-microbe Interactions 2: Volume 2 Gary Stacey, Noel T. Keen

Plant-Microbe Interactions, Volume 2 Volume 1 of this series has made its appearance and dealt forcefully with important current topics in the field of plant-microbe interactions. We believe that the quality of those chapters was high and should serve as a focal point for the state of the art as well as an enduring reference. Volume 2 builds upon these accomplishments. Chapter 1 discusses the fascinating lipo-chitin signal molecules from Rhizobium, aspects regarding their biosynthesis, and the basis for host specificity. These molecules are a cardinal example of how microorganisms influence plant development and stimulate speculation that they have identified a previously unknown aspect of plant hormone activity. Chapter 2 continues the discussion of Rhizobium by considering the trafficking of carbon and nitrogen in nodules. Although the ostensible advantage of nodules to plants is the fixation of atmospheric nitrogen, the actual process involved in supplying reduced nitrogen to the plant host is complex.
