Excerpt from A Method of Determining the Dew Points of Fuel-Air Mixtures

The dew points can be computed from the vapor pressure of the fuel when it consists of a single compound. When it is a solution, the condensation temperatures can not, in general, be inferred from its vapor pressure or the vapor pressures of its components, even if their proportions in the solution are known. The composition of a gasoline is usually not even qualitatively known.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com)

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
