The Structure and Dynamics of Cities: Urban Data Analysis and Theoretical Modeling Marc Barthelemy

With over half of the world's population now living in urban areas, the ability to model and understand the structure and dynamics of cities is becoming increasingly valuable. Combining new data with tools and concepts from statistical physics and urban economics, this book presents a modern and interdisciplinary perspective on cities and urban systems. Both empirical observations and theoretical approaches are critically reviewed, with particular emphasis placed on derivations of classical models and results, along with analysis of their limits and validity. Key aspects of cities are thoroughly analyzed, including mobility patterns, the impact of multimodality, the coupling between different transportation modes, the evolution of infrastructure networks, spatial and social organisation, and interactions between cities. Drawing upon knowledge and methods from areas of mathematics, physics, economics and geography, the resulting quantitative description of cities will be of interest to all those studying and researching how to model these complex systems.

From reader reviews:

Curtis Salas:

As people who live in typically the modest era should be update about what going on or details even knowledge to make all of them keep up with the era and that is always change and move ahead. Some of you maybe will probably update themselves by reading through books. It is a good choice in your case but the problems coming to anyone is you don't know which one you should start with. This The Structure and Dynamics of Cities: Urban Data Analysis and Theoretical Modeling is our recommendation to help you keep up with the world. Why, because this book serves what you want and need in this era.

Ted Bryant:

Hey guys, do you really wants to finds a new book to study? May be the book with the concept The Structure and Dynamics of Cities: Urban Data Analysis and Theoretical Modeling suitable to you? Often the book was written by well known writer in this era. The book untitled The Structure and Dynamics of Cities: Urban Data Analysis and Theoretical Modelingis the one of several books which everyone read now. This book was inspired a lot of people in the world. When you read this publication you will enter the new way of measuring that you ever know just before. The author explained their concept in the simple way, therefore all of people can easily to understand the core of this reserve.
